100 purchase face + 100 pcs. Passwords +
2 mechanical keys

It can distinguish the twins

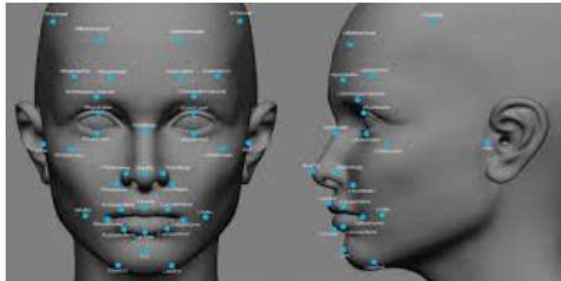

Photos can't open the locks

In the light, It also can identify the user's
face

3D FACE RECOGNITION

Locks secure personal items, firearms and other valuables and provide personal safety. Locks have evolved in both strength and technological innovation. Electronic and mechanical locks are among the most popular locks used. Certain markets has proved users of electronic lock keep on increasing especially in some developing countries in East Asia with two digits percentage of growth since 2010.

Electronic locks are often quicker to access than mechanical locks. It takes only a few seconds to punch in a code rather than turning a dial to find numbers or searching your metal keys. Combinations are easier to change than is the case with mechanical locks.
